Cattle dung, coconut shells, sand, and release the earthworm species two times per year."</p> <p>METHOD</p> <p>"Vermicompost is known to be the world's best fertilizer. Vermicomposting is a method of preparing enriched compost with the use of earthworms. It is one of the easiest methods to recycle agricultural wastes and to produce quality compost. Earthworms consume biomass and excrete it in digested form called worm casts. Worm casts are popularly called as Black gold. The casts are rich in nutrients, growth promoting substances, beneficial soil micro flora and having properties of inhibiting pathogenic microbes. Decomposable organic wastes such as animal excreta, kitchen waste, farm residues and forest litter are commonly used as composting materials. In general, animal dung mostly cow dung and</p>

	<p>dried chopped crop residues are the key raw materials. Mixture of leguminous and non-leguminous crop residues enriches the quality of vermicompost. Red earthworm (<i>Eisenia foetida</i>) is preferred species of earthworms because of its high multiplication rate and thereby converts the organic matter into vermicompost within 45-50 days. Since it is a surface feeder it converts organic materials into vermicompost from top. Vermicomposting is done by either bed or pit method. In bed method composting is done on the pucca / kachcha floor by making bed of organic mixture while in pit method it is done in the cemented pits."</p> <p>-Vermicomposting unit is kept in a cool, moist and shady site Cow dung and chopped dried leafy materials are mixed in the proportion of 3: 1 and are kept for partial decomposition for 15 – 20 days. A layer of 15-20cm of chopped dried leaves/grasses is kept as bedding material at the bottom of the bed. Beds of partially decomposed material of size 6x2x2 feet should be made.</p> <p>-Red earthworm (1500-2000) are released on the upper layer of bed.</p> <p>-Water is sprinkled immediately after the release of worms.</p> <p>-Beds are turned once after 30 days for maintaining aeration and for proper decomposition.</p>

INTERNATIONAL YOGA DAY

The art of Yoga helps in controlling an individual’s mind, body, and soul. It brings together physical as well as mental disciplines to achieve a peaceful body and mind- and that is what NCC stands for. On the 21st of June 2019, the SW cadets of 2 (A) girls battalion from St Joseph’s college for women (A) participated in International yoga day at the A.S Raja ground. The session was held by the Art of Living. The Art of Living is an international NGO which offers several stress elimination and self-development programs based through yoga mostly. The session began early in the morning at 7:00am. Close to 30 cadets participated and greatly benefited from this session. It was an honor to have the art of living conduct this program and help us reach our inner peace through meditation.

BEACH CLEANUP

“Waterwater everywhere, not a drop to drink” – Samuel Taylor Coleridge.

Visakhapatnam is a coastal city. Everyday tons of polluted waste get washed up our shores, making it dirty. It doesn’t just affect our health, but it also deeply affects the health of our oceans. The SW cadets of 2 (A) girls battalion from St Joseph’s college for women (A) took upon this cause and went for a beach cleanup at RK Beach. The girls worked together and cleared majority of the garbage that got washed up at the beach. The girls worked relentlessly and motivated the public around them to join them for the cleanup. They were appreciated for their efforts by the public. Close to 50 cadets participated in the cleanup on the day.
